Professional Experience	<b>Infovital Italy S.R.L (formerly Empirix Italy S.R.L), Italy</b> Modena, Italy <b>Data Analyst Engineer + Tech Lead - Data analytics &amp; visualization</b> <ul style="list-style-type: none"><li>Led <i>design, development, and integration</i> of <i>data adapters, analytic metrics/KPIs and aggregators</i> to consume google protocol buffer SIP stream and provide <i>business insights/reports</i> on STIR/SHAKEN for telecom CSPs, generating sales of around \$2M in 18months.</li><li><i>Troubleshooting and root cause analysis</i> of data integrity failures on customer AWS clusters + <i>create/modify</i> CI/CD pipelines.</li><li>Data transformation troubleshooting on <b>postgres</b> and <b>clickhouse</b> DB on AWS cluster.</li><li>Scrum master since 2020 &amp; Tech lead of Solution packages (Customer offerings) development.</li></ul>	<b>February 2018 to Present</b>
	<b>Data Analytics &amp; Optimization for Energy Applications Laboratory,</b> Politecnico di Milano, Piacenza, Italy <b>Research Assistant – Machine learning, Smart meter Data analytics and Data Science</b> <ul style="list-style-type: none"><li>Data extraction from public dataset, Data Cleaning and analytics using Python:pandas.</li><li><b>Developing a data-driven model to forecast</b> the behaviour of <b>HVAC</b> systems with around 85% accuracy benefitting cost savings around 5% for energy providers serving smart grids.</li><li><b>Time series analysis:</b> Neural Networks, Regression</li></ul>	<b>October 2016 to October 2017</b>
	<b>ElektroThermalKinetics Pvt Ltd,</b> Chennai, India <b>Engineer – Project Manager</b> <ul style="list-style-type: none"><li>Technical consultant, Design, &amp; engineering of research equipment for combustion applications at IIT, Madras</li></ul>	<b>April 2013 to June 2014</b>
	<b>Education</b>	<b>M.Sc. Energy Engineering (Renewables and Sustainability)</b> Politecnico di Milano, Piacenza, Italy <ul style="list-style-type: none"><li>Energy systems, industrial heat &amp; power technologies, Low carbon technology and renewables, Electric conversion of renewable energy sources using wind and solar power.</li><li>Data analytics on Building Energy Management Systems dataset using pandas</li></ul> <b>B.Sc. Mechanical Engineering</b> Anna University, Chennai, India <ul style="list-style-type: none"><li>Computational Fluid Dynamics, HVAC systems for buildings, Finite Element Analysis</li></ul>
<b>Skills</b>	<ul style="list-style-type: none"><li>Python (<b>Packages:</b> Scikit-learn, pandas, numpy, matplotlib, PyTorch)</li><li>ETLs (proprietary methods)</li><li>SQL (Postgres, Clickhouse)</li><li>Shell scripting</li></ul> <b>Operating System:</b> Windows & Linux <b>Experience with tools:</b> Docker, Maven, <a href="#">AWS</a> & Kubernetes, <a href="#">GCP</a> , <a href="#">Apache Spark</a> & Airflow fundamentals.	
<b>Personal Projects</b>	<ul style="list-style-type: none"><li>Data Science:<ul style="list-style-type: none"><li>Data visualization &amp; prediction on several data sets including COVID-19 &amp; Bike sharing. Here .</li><li>Basics of machine learning using <a href="#">PyTorch</a> and deployment</li></ul></li><li>Software development + CI/CD by developing from scratch, a cloud native application to track the International Space Station. Click  to check the Gitlab hosted project.</li></ul>	
<b>Academic Projects</b>	<b>M.Sc. Thesis: Machine learning-based prediction of HVAC load by smart meter analytics</b> <ul style="list-style-type: none"><li>Using open-source toolkits to build a model using NILM (Non-Intrusive Load monitoring) techniques and machine learning to estimate demand response by forecasting energy usage of HVAC systems using publicly available datasets. Perform <b>data extraction, cleaning and transformation using pandas</b>. Techniques and tools include Python, scikit-learn, especially neural networks, Random Forest decision tree and SVM. The aim is to reduce user utility costs without compromise of comfort. Enabling demand identification for the smart grid and reduction of primary energy source.</li></ul>	

---

**Energy & Environmental technologies for building systems**

- Analyse and visualize the yearly energy consumptions of a multi-story commercial building with specific application & location using Residential Load Factor method implemented in Python. The analysis included different thermal zones, user defined construction sets and schedules and other parameters.

---

**IoT smart incubator (Data-driven systems control)**

- In-house smart incubation unit with DS18B20 temperature sensor, LDR GL5516 photo resistor, 40W heating unit, ventilation, TowerPro SG90 servo motor connected to a Raspberry Pi 3 (GPIO) ports and coded using Python. On-demand ambient conditions maintenance with quick variability and 0.5°C sensitivity.

---

**Awards**

- **Winning Team** of an innovation contest for international students from engineering and business backgrounds organised by **ASTER** in collaboration with **ER.GO** and launched by **VERTIV** (Emerson Network Power) at **Research to Business 2017** (12<sup>th</sup> International Exhibition on Industrial Research and Competences for Innovation), Bologna, Italy. Secured €1000 reward for the most creative and feasible business strategy.
- Recipient of **Gold scholarship** (complete waiver) for the 2-year master's degree at Politecnico di Milano, Italy
- Event Manager in **INGENIOUS' 12-** A National Level Design Competition organized by the Society of Mechanical Engineers at Rajalakshmi Engineering College, Chennai, India.

---

**Publication**

Machine learning based short-term predictions of air-conditioner loads through smart meter analytics, Article: Energies Journal MDPI, 2017. Link to publication 

---

**Languages**

- English – Professional proficiency
- Italian – Intermediate
- Tamil – Native speaker
